SYSTEMS AND PROCEDURES JOURNAL

ANNUAL INDEX

January–February

8 **How To Integrate Line And Staff Functions**
We have a tendency to ignore anything that smacks of shared responsibilities because we are captives of a philosophy which declares that line and staff men have different goals.
Charles D. Boyle

14 **A Philosophy Of Work Measurement**
The important questions are not those of measurement technique; rather they concern the definition of the measurement problem.
Marvin E. Mundel

20 **A Record Retention Program Is For You**
By following the steps outlined here, one can set up and maintain an orderly system of record retention that will reduce costs.
Oswald B. Aaberg

22 **Shall and Shall Not**
Should management tell subordinates what **not** to do as well as what **to** do?
Brian V. Rothery

26 **Programed Instruction: The Systems Approach To Training**
The systems approach to programed instruction is tailored to meet measurable behavioral objectives that are specified with precision in advance.
Scott B. Parry

32 **Establishing Classification Schemes For Communications**
For control of the issuance of duplicate material, its distribution and ultimate filing, an analysis is needed involving four cardinal points as outlined in this article.
Jules Levin

37 **Too Long in Systems?**
Changing corporate requirements have put the systems man at the crossroads? Where does he go from here?
Robert C. Weisselberg

40 **Questions And Answers About SIS**
The improvement of particular clerical operations may hinge upon what Short Interval Scheduling has to offer.
Frank L. Johnson

March–April

10 **Satisfying The Need To Know—In Real-time**
AT&T's version of the management information system is a concept involving the entire sphere of telephone operations.
J. T. Mapletoft

20 **Optimum Allocation Of A Budget**
The model here considered will prove useful in a wide range of important problems concerned with the optimum allocation of funds.
Ralph Oravec

26 **A Practical Approach To Quality Control**
Because few clerical operations fall within the framework of the conventional program, a minimum of statistical controls are required.
Bennet B. Murdock

32 **Keypunch Standards Without Stopwatch**
Account for the variation in source documents and develop a technique for allocating units of time to these individual differences.
Gordon A. Peters

36 **The Practical, Unpretentious, Nomographic Computer**
The nomograph provides reasonably accurate solutions to mathematical problems with a minimum of "set-up" time.
Jack R. Lander

41 **A Compelling Approach To Forms Administration**
Technical skills of both supplier and user must prevail in the area of automated administrative systems.
Howard J. Martin

44 **Is Management Ready For Professional Status?**
Somehow, management, with its widely dispersed elements, must come up with some common standards to attain professional status.
Charles R. Busbey

45 **Systems Functions, Relationships, Pitfalls**
Here are some pointers on how systems men should go about their business.
Leslie H. Matthies

May–June

8 **A New Look At Forms Control**
An experienced management analyst examines the reasoning behind the need for forms, and explains how to design them.
Ada Barnard

16 **Putting The System In Writing**
A systems manual must be well-prepared, properly presented and available to all employees and maintained on a current basis.
Harry R. Mayo

22 **The Assistant Chief: Asset Or Liability?**
There should be no organization-wide policy establishing deputies for major divisional units. Each instance should stand on its own.
David S. Brown

28 **What Is A Files Performance Index?**
A records station exists solely to provide staff with information. The FPI shows whether or not it's doing its job well.
William B. Warren

32 **The Logical Process Of Linear Programming**
Once the mystery of this and other OR techniques is dispelled, one can see that they have great potential utility in clerical application.
Donald P. Kenney

38 **Inventory Squeeze Between Finance And Production**
The squeeze method starts with the financial department pushing down on inventories in broad categories.
D. F. Davis

44 **An Operating Concept For Service Organizations**
Service demand, standards of excellence and work measurement are three areas in the service organization in which results can be identified.
C. J. McGarr

51 **Automating The Time Study Data Process**
A successful, five-program system for time study data could also be used to generate statistical information for data on any subject.
Stanton F. Lavelle

July–August

8 **Line Of Balance Gives The Answer**
A charting technique designed to broaden management's visibility of progress and to allow for corrective action has helped Douglas Aircraft meet its schedule requirements.
Norman E. Finck

16 **Management's View Of The Systems Function**
Business management is aware of the potentialities for a new approach to systems and procedures and management information systems.
Walker L. Cisler

24 **Controlling And Evaluating Data Processing Operations**
Unique in this application is the scope and operations covered; manual as well as machine operations are given equal treatment and evaluation.
George J. McDermott

28 **The Total Systems Myth**
The assumption that the "total" approach is the most important one is translated into practice by writers who define the role of systems analysts.
W. M. A. Brooker

33 **Who Is The New Manager?**
Information technology has revolutionized some managerial functions but it has not depersonalized the functions of the managers.
Peter B. Schoderbek
Charles G. Schoderbek

37 **An Answer To The Challenge Of World Markets**
Archaic controls over creative men hardly provide the environment that leads to significant research and development discoveries.
Stephen J. Barres

39 **Quicker Closings for Multi-Plant Operations**
In the drive to present management with complete financial information faster than ever, here is a review of how one company has advanced.
Moritz E. Pape

September–October

12 **A Systems Approach To Managing By Objectives**
The comprehensive approach to the confusing management-by-objectives concept differentiates among objectives, goals and plans.
Walter R. Mahler

20 **Systems, Computers And Operations Research**
Here's how one company pursued computer-oriented managerial systems by understanding current systems and designing and installing objective systems.
R. J. Zolad

27 **What Is Segmented Program Design?**
A brief outline of this technique and its advantages over other methods of program design.
Joseph Holzer

28 **The Rampant Organization**
Management had better observe the growth of the organization for it may have in it the seeds of self-destruction.
Raymond F. Valentine

34 **A Realistic Appraisal of Instructional Programming**
As a training tool, programmed instruction is not necessarily a cure-all which will solve problems on its own any more than other teaching techniques.
Richard J. Morse

40 **The Office Manager In A "Systems" World**
A combination of the people-oriented approach of the office manager and the methodical analysis of the systems man will produce the greatest strides in efficiency.
Harry L. Wylie

November–December

10 **Factored Cost: A Management Systems Approach To Cost Control**
The approach to this problem was to examine the cost relationships between material acquisition and usage by the various labor categories and related classes of material involved.
Rolf E. Rogers

14 **What Is Operations Research?**
In 20 years this method of studious inquiry, with its four main classes of models, has grown from a relatively small activity to a full-fledged branch of science.
Norman J. Driebeek

20 **Plug The Holes With Paper**
Here's how one company developed new forms and procedures for correcting weaknesses in the areas of stock requisitioning and transfers, miscellaneous internal transfers and no-charge shipments from the company.
Alan N. Hooker

24 **Theory And Design Of The Management Information System**
A management information system built around "effectiveness" information will offer these specific benefits: deeper insight into problems; focus on areas of significance; and elimination of paperwork.
William R. Robins

30 **Marketing The Systems Function**
The successful systems manager will respect the importance and status of line officials and recognize the frailties and dignity of people. He must combine the talents of the diplomat, salesman and analyst in that order.
Milton Reitzfeld

35 **Another Use For The Information Utility**
The building of a sound future for the information retrieval technology calls for an unprecedented type of cooperation from public and private industry in sharing certain types of information resources.
Belden Menkus
